#### **FUND MANAGER'S COMMENTS**

Heading into 2025, we anticipate that the trajectory for rate cuts in 2025 to continue globally although the speed and quantum remains uncertain. On the domestic front, the reduction of Government bond supply and contained inflation are positive factors for the Malaysian bond market as we expect continued demand from local institutions. With global growth looking to be on the downward pressure and central banks reducing their interest rates globally, we see a potential inflow of foreign investors in our local market. Meanwhile, in the corporate bond space, we see more issuers from various sectors are issuing papers to raise capital to take advantage of the economic momentum. As such, it would be an opportunity for us to diversify our sector exposure and invest in higher yielding papers. Moreover, Bank Negara Malaysia maintained the Overnight Policy Rate (OPR) at 3.00%, consistent with expectations amid manageable inflation and a robust growth outlook and we see foresee OPR to remain intact until at least the 1H of 2025. In light of the global economic conditions and interest rates direction, we opine that yields to remain favorable for the bond market with lesser reward in going long duration as yield curve still remains flat. Hence, we will maintain our duration between 5 - 6 years, while focusing on high quality corporate bondsfor yield pick-up.

#### **RISKS**

All investment carries some form of risks. The potential key risks include but are not limited to the following:

## Sun Life Malaysia Islamic Bond Fund

November 2024

RISKS (CONTINUED)	
Equity risk	The target fund is allowed to hold redeemable Sukuk that are convertible into equity. In the event Opus AM chooses to convert the redeemable Sukuk into equity, the target fund will be exposed to equity risk. Equity risk refers to the performance of the equity securities that is much more volatile and difficult to predict as compared to Sukuk. The effect of such volatility and unpredictable performance of the equity securities may have an adverse impact on the target fund's NAV per unit. However, this risk is limited as Opus AM will sell the said equity within 3 months from the date of conversion.
Concentration risk	The target fund is susceptible to the concentration risk. As the target fund has no limit restriction for money placements or deposits with any single financial institution, there is a possibility that the target fund may be exposed to a single financial institution. The target fund may also be exposed to a single or group issuer limits if the NAV is RM30 million and below. The concentration risk is managed through the monitoring of credit analysis conducted on financial institutions and issuers.
	This risk can be referred to:
	<ol> <li>Issuer's creditworthiness         This risk is intrinsic with the target fund's investments in Sukuk and refers to the issuer         of the Sukuk's creditworthiness and its expected ability to repay debt. Default happens         when the issuer is not able to make timely payments of profit on the coupon payment         date or principal repayment on the maturity date. If default happens, this will cause a         decline in the value of the defaulted Sukuk and subsequently affect the target fund's         NAV per unit.     </li> </ol>
Credit/Default risk	<ul> <li>Opus AM minimises the target fund's credit risk by adopting the following:</li> <li>Conducting thorough credit analysis before any investment to ascertain the creditworthiness of different issuers; and</li> <li>Diversifying the portfolio by investing in different issuers, if possible.</li> </ul>
	2. Financial institutions' creditworthiness This risk refers to a financial institution that is a party to the trade or placement contract of the target fund, may default in its payment. Opus AM minimises the target fund's credit and default risk by conducting a thorough credit analysis on the financial institutions' creditworthiness. With regards to the trading of the target fund's Sukuk, the risk is minimised by dealing only with any financial institution via Real Time Electronic Transfer of Funds and Securities ("RENTAS") system.

## Sun Life Malaysia Islamic Bond Fund

November 2024

RISK (CONTINUED)	
Liquidity risk	Liquidity risk is defined as the ease with which a security can be sold at or near its fair value depending on the volume traded on the market. This risk is more pertinent to Sukuk and Islamic money market instrument of the target fund in view that such investments are generally not as easily liquidated as compared to equities. In the event some of the Sukuks and Islamic money market instruments of the target fund are not actively traded, there is a risk Opus AM may not be able to easily liquidate such investments and as a result, investors may face difficulties in redeeming their units.
Inflation/Purchasing Power Risk	Inflation can be described as increases of price level of goods and services and is commonly represented using the consumer price index. High inflation reduces the purchasing power of a fixed sum of money. In an inflationary environment, fixed rate securities are exposed to higher inflation risk than inflation-linked securities. The investor's investment in the target fund may not grow proportionately to the inflation rate. This will then decrease the investor's purchasing power even though the investment in monetary terms may have increased.
