### PERFORMANCE RECORD

This fund feeds into Affin Hwang AIIMAN Select Income Fund ("target fund") with the objective to provide investors with regular income stream through Shariah-compliant investments. The target fund will invest in a diversified portfolio of Sukuks, Shariah-compliant equities and Islamic money market instruments.

Table below shows the investment returns of Sun Life Malaysia AIIMAN Select Income Fund versus its benchmark as at 30 April 2021:

%	YTD	1M	6M	1-Year	3-Years	5-Years	Since Inception
<b>Fund*</b>	-0.05	0.32	2.41	6.75	12.10	25.16	25.35
<b>Benchmark</b>	0.75	1.10	2.00	7.89	7.31	15.44	17.61

#### FUND MANAGER'S COMMENTS

- The MSCI Asia ex-Japan index closed 2.4% higher in April. The MSCI China index edged just 1.2% higher amid concerns on tighter antitrust regulation and weaker than expected China factory data.
- Local markets treaded cautiously with the KLCI inching 1.8% higher as rising COVID-19 cases sparked fears of another movement control order ("MCO").
- In the April FOMC meeting, the Fed reassured markets that it will keep rates near zero despite acknowledging a strengthening economy, citing transitory inflation. As expected, they left the fed funds rate unchanged at 0% to 0.25% and left its asset purchases at USD120bil a month.
- Shorter dated bond yields remain relatively anchored while the longer dated bonds buying activities as levels post-March correction turned attractive. The 10y MGS closed April at 3.14% vs. 3.24% at the end of the previous month.

**STRATEGY:** The fund's fixed income exposure was maintained at around 60%, while equity exposure was increased to around 33%.

- The Fund targets a short-to-neutral duration to cushion any impact of rising yields. We also prefer to deploy cash into corporate primary issuances for better yields.
- Major central banks are unlikely to raise rates anytime soon as recent resurgence in Covid-19 cases and slower than expected pace of vaccinations continue to linger. Locally, we expect OPR to remain at 1.75% as global growth risks have abated while domestic growth is expected to improve, albeit sporadic resurgence of virus cases.
- Inflation will likely be transitory from a low base effect, however, we believe major central banks would take a wait-and-see approach and see sustainability of economic data in decision to taper.
- We prefer government sukuk due to attractive valuations and superior liquidity. Any further correction would represent a buying opportunity as valuations turn attractive.
- For corporate sukuk, preference is towards the short to mid-term tenure for yield pickup. Continue to be mindful of credit selection with preference towards good quality credits. Expect some support in this space after a strong primary market in 1Q21.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Manager's Risk</b>	This risk refers to the day-to-day management of the target fund by Affin Hwang which will impact the performance of the target fund. For example, investment decisions undertaken by Affin Hwang as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error, fraudulent, dishonesty or weaknesses in operational process and systems, may adversely affect the performance of the target fund.
<b>Inflation Risk</b>	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
<b>Credit/Default risk</b>	Credit risk relates to the creditworthiness of the issuers of the investment (Sukuk and Islamic money markets instruments) and their expected ability to make timely payment of profit and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investments, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
<b>Counterparty risk</b>	This risk concerns with the target fund's investment in Shariah-compliant derivatives where the other party in an agreement may default on the terms of the agreement. Generally, counterparty risk can be reduced by emphasis on credit analysis of the counterparty to determine its creditworthiness.
<b>Interest rate risk</b>	<p>Interest rate risk refers to the impact of interest rate changes on the valuation of Sukuk. When interest rates rise, Sukuk's prices generally decline and this may lower the market value of the target fund's investment in Sukuk. The reverse may apply when interest rates fall. In order to mitigate interest rate risk, Affin Hwang will need to manage the debt portfolio taking into account the coupon rate and time to maturity of the Sukuk.</p> <p>Note: Interest rate is a general indicator that will have an impact on the management of the target fund regardless of whether it is a Shariah-based fund or otherwise. It does not in any way suggest that the target fund will invest in conventional financial instruments.</p>
<b>Stock Specific Risk</b>	Prices of a particular Shariah-compliant stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such Shariah-compliant stock will adversely affect the target fund's NAV.
<b>Shariah-compliant warrants investment risk</b>	The value of the Shariah-compliant warrants will depend on the pricing of the underlying security whereby the growth and performance prospect of the underlying security would consequentially affect the value of the Shariah-compliant warrants. In addition, the value of the Shariah-compliant warrants may decrease exponentially as the Shariah-compliant warrants approach their maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. Affin Hwang may consider unwinding these Shariah-compliant warrants if there are material adverse changes to its value with the aim to mitigate the risk.

**RISKS (CONTINUED)**

**Liquidity risk**

Liquidity risk arises in two scenarios. The first scenario is where an investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the investment, by its nature, is thinly traded. This will have the effect of causing the investment to be sold below its fair value which would adversely affect the NAV of the target fund.

**Currency risk**

As the investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

**Regulatory risk**

The investments of the target fund will be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, Affin Hwang seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream medias) in that country. Affin Hwang Affin Hwang may dispose its investments in that particular country should the regulatory changes adversely impact the unit holders' interest or diminish returns to the target fund.

**Country risk**

Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests in. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund to fall.

**Reclassification of Shariah status risk**

This risk refers to the risk that the currently held Shariah-compliant equities in the target fund may be reclassified to be Shariah non-compliant in the periodic review of the equities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), the Shariah Adviser or the Shariah boards of the relevant Islamic indices. If this occurs, Affin Hwang will take the necessary steps to dispose of such equities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess capital gains derived from the disposal of the Shariah non-compliant equities. Affin Hwang will be required to dispose of these equities immediately if the prices are above the purchase price. Should the prices be below the purchase price, Affin Hwang may choose to hold on to these holdings until the prices meet the purchase price. Nevertheless, should Affin Hwang decide to dispose of these equities below the purchase price, the target fund will be faced with the risk of realising its losses, thus negatively impacting the NAV of the target fund.
