#### FUND MANAGER'S COMMENTS

The Fund was up down 2.81% in MYR terms in August, outperforming the benchmark by 102bps. YTD, the Fund is down 12.57%, underperforming the benchmark by 110bps.

Developed markets declined on the Fed's hawkish comments from the Jackson Hole meeting. S&P 500 Index and MSCI Europe declined by 4.1% and 4.9%. MSCI Japan increased by 1.1% MTD in local currency term. The US Dollar continued to strengthen by 4.3%, Japanese Yen and Euro depreciated by 8% and 3%, respectively. US 10-year bond yield increased to 3.35% at the time of writing.

Economic growth continue to weaken across all developed markets as reflected by weaker manufacturing PMI. However, US job growth remain solid with nonfarm payrolls increasing to 315k in August. Average hourly earnings growth year-on-year came down to 5.2%. Housing starts declined by 10% MoM in July. Although house inventory has picked up over the month, the level is still low with record low homeowner vacancy rate. The downside to housing market would be limited by the under-supply situation. Forward 12-month corporate earnings are revised down for Europe but stay flat for US and Japan. Earnings downgrades are more broad-based whereas US Energy sector continued to see earnings upgrade.

We increase equity allocation to US and mainly in growth active funds on the expectation that high quality growth stocks may continue to outperform if inflation eases towards year-end. If this happens, the valuation of growth stocks may be supported. Our underlying funds have focused on investing in quality companies with growth and earnings visibility, at reasonable valuation. We maintain neutral allocations to Europe and Japan. Moving forward, Fed's monetary tightening path and whether economy would have a soft or hard landing, as well as the recent US-China conflict may continue to weigh on equity markets.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
<b>Stock specific risk</b>	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
<b>Country risk</b>	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.
<b>Currency risk</b>	As the investments of the target fund may be denominated in currencies other than base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should be aware that if the currencies in which the investments are denominated depreciate against the base currency, this will have an adverse effect on the NAV of the target fund and vice versa. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.
<b>Fund manager's risk</b>	Since the target fund invests into collective investment scheme managed by another manager, the fund manager has absolute discretion over the fund's investment technique and knowledge, operational controls and management. In the event of mismanagement of the fund and/or the management company, the NAV of the target fund, which invests into the fund would be affected negatively. Although the probability of such occurrence is minute, should the situation arise, Principal (S) will seek for an alternative collective investment scheme that is consistent with the objective of the target fund.

### RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

#### **Credit and default risk**

Investments of the target fund may involve a certain degree of credit and default risk. Generally, credit and default risk is the risk of loss due to the counterparty's and/or issuer's non-payment or untimely payment of the investment amount as well as the returns on investment. Principal (S) aims to mitigate this risk by performing fundamental credit research and analysis to determine the creditworthiness of its counterparty and/or issuer.
