## FUND MANAGER'S COMMENTS

In October, the Fund fell -0.30%, under-performing the benchmark by 0.44%. Year-to-date ("YTD"), the Fund was up 0.84% while the benchmark has risen 0.24%.

In this era of quantitative easing ("QE"), stock prices are being driven more by the fall in the risk premium rather than valuations and earnings growth. After the announcement of the Japanese QE, the CBOE Volatility index ("VIX Index") has fallen back to 14.3. In Malaysia, the situation is further amplified by the dominating presence of government funds. The market has recovered most of the losses and the market price earnings ratio ("PER") is now back at an elevated 16.5 times compared to a more reasonable 15.0 times at the low. Earnings per share ("EPS") growth for 2014 and 2015 are at 0.0% and 9.0% respectively. We maintain our December 2014 and 2015 target of 1920 and 2050 respectively - both based on 15.5 times target PER.

In terms of strategy, we intend to stay fairly invested. We continue to take profit on mid-small cap stocks and shift to blue-chips and defensive sectors. We remain overweight F&B and retail. We are increasing weights in construction and plantations. For fixed income, we continue to concentrate mainly on corporate bonds. We aim to be fully invested but remain cautious as increased supply of corporate bonds may push yields higher. We also prefer higher coupon bonds to cushion the impact of increasing yields.
