FUND MANAGER'S COMMENTS

- The broader MSCI Asia ex-Japan fell 2.86% in September with Korea bearing the brunt of losses. The tech-heavy KOSPI index closed 3.57% lower pressured by rising bond yields.
- Bright spots were seen in China's economy with recent purchasing managers index (PMI) data bouncing back to expansion territory. Its manufacturing PMI climbed to 50.2 in September from 49.7 in the previous month beating market expectations. The 50-point threshold separates growth from contraction.
- Property sales in China also saw modest improvements amidst a swath of stimulus measures. Industry statistics reported that the total recorded sales of the top 50 property developers in China increased 23% m-o-m. Though, on a y-o-y basis it was still down 25%.
- Recent improvements in China's economic data may indicate that the country's economic downturn is stabilising. It will be crucial to continuously monitor key economic indicators as well as stay tuned for substantial stimulus announcements from Beijing. In September, the People's Bank of China's (PBoC) announced a second cut to its reserve requirement ratio (RRR) this year to bolster growth
- On the domestic front, the benchmark KLCI ended 1.91% lower. Politics dominated the month as recent by-elections for the Pulai parliamentary seat and Simpang Jeram state seat in Johor concluded with the Pakatan Harapan-Barisan Nasional (PH-BN) coalition defending both seats. With politics at a status quo and appearing more settled now, we could see renewed focus by the government on implementing policy reforms. All eyes will be on Budget 2024 scheduled for tabling in Parliament on October 13.

STRATEGY:

- On a YTD basis, the fund returned -0.3%, lagging the benchmark due to its initial underweight in countries such as India, Taiwan and Korea which have outperformed, while overweighting HK/China which underperformed.
- MTD, the contributors to the Fund were due to positive company specific events. Hugel performed well as data shows strong Korea toxin export while the upcoming Cricket World Cup hosted by India coinciding with the festive season supporting consumption boosted investors sentiments on Barbeque Nation Hospitality.
- Over the month, the portfolio manager initiated positions in a Malaysian financial services company on the back of attractive valuations and a Taiwan listed semi substrate maker due to expectations of recovery in utilisation rate driven by restocking in short term and product upgrade migration in long term.
- Portfolio are positioned defensively while looking to add opportunistically on seasonality as fourth quarter seasonally has been good for markets.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Credit and default risk	Credit risk relates to the creditworthiness of the issuers of the debentures or money market instruments (hereinafter referred to as "investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
Interest rate risk	This risk refers to the impact of interest rate changes on the valuation of debentures or money market instruments (hereinafter referred to as "investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the investment. The reverse may apply when interest rates fall.
Warrants investment risk	The value of the warrants will depend on the pricing of the underlying security, whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. We may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Currency risk

As the investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

Currency risk at the target fund level

The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments (other than in MYR) may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.

Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the policy owners' interest or diminish returns of the target fund.
