FUND MANAGER'S COMMENTS

- Recent hawkish comments by Jerome Powell during the Jackson Hole Economic Symposium have curbed expectations of a transition to looser monetary policy. Following Powell's speech, the S&P 500 index fell, ending August lower by 3.8%.
- Malaysia's 2Q GDP figures reported an expansion of 8.9% vs 5.0% in 1Q, ahead of consensus expectations of 7.0%. Domestic demand was the main contributor to overall GDP. However, pace of growth is expected to soften as the one-off cash aid from EPF withdrawals wane alongside higher inflation interest rates as well as heightened external risks.
- Malaysia's headline inflation accelerated for the fourth straight month to a 14-month high of 4.4% year-on-year in July, a 1.0% increase from 3.4% in June.
- July saw local retail investors turn into net sellers for the first time in 2022, with a net sale of RM16.03 mil. Foreign investors were the only category of investors that were net buyers (RM174.98 mil). YTD, foreign investors remained the largest net buyer in the local market.
- 2Q 2022 results season saw banks emerging as the biggest winner, with most reporting results that were in-line or above expectations underpinned by strong loan growth and better net interest margins. However, the technology sector saw mixed results with many coming in-line or below expectations. Many tech names sounded caution on their forward guidance citing higher costs amidst supply chain disruptions and higher labor costs.

STRATEGY:

- The fund's invested levels was maintained at around 75% during the month. The fund remains positioned in quality large-cap Shariah-compliant stocks in the domestic market.
- Markets have been turning volatile again after hawkish statements released from Jackson Hole. We are sticking to the view that inflation will trend down gradually in the coming months.
- The rebound in the Malaysian economy was strong, well on track to achieve its 6% GDP growth this year. As such, we favor reopening beneficiaries such as the tourism and consumer sector which benefits from the firm transition to an endemic phase.
- Foreign funds continue to flow into Malaysia – improved perception of governance may lift foreign shareholding in the long run.
- We are positive on banks, which is a clear beneficiary of economic growth, coupled with strong outlook on loan growth and asset quality. We also like technology companies, where we see value emerging after the recent heavy selloff, and which has strong earnings visibility driven by secular growth trends (e.g. 5G, EV, solar energy).

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk arises because of factors that affect the entire marketplace. Factors such as economic growth, political stability and social environment are some examples of conditions that have an impact on businesses, whether positive or negative. Market risk cannot be eliminated by diversification. It stems from the fact that there are economy-wide perils which threaten all businesses. Hence, investors will be exposed to market uncertainties and no matter how many Shariah-compliant securities are held, fluctuations in the economic, political and social environment will affect the market price of the Shariah-compliant investments either in a positive or negative way.
Fund management risk	This risk refers to the day-to-day management of the target fund by Affin Hwang which will impact the performance of the target fund. For example, investment decisions undertaken by Affin Hwang as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error, fraudulence, dishonesty or weaknesses in operational process and systems, may adversely affect the performance of the target fund.
Performance risk	There is no guarantee in relation to the investment returns.
Inflation risk	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
Liquidity risk	Liquidity risk arises in two scenarios. The first scenario is where the target fund's investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the target fund's investment, by its nature, is thinly traded. This will have the effect of causing the target fund's investment to be sold below its fair value which would adversely affect the NAV of the target fund.
Credit/Default risk	Credit risk relates to the creditworthiness of the issuers of the investment (Islamic money market instruments) and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investments, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
Equity investment risk	This is the risk associated with investing in a particular equity. The value of individual equity is mainly determined by its potential growth in earnings, sound management, and treatment of minority shareholders, as well as a myriad of other factors. Failure to achieve these would result in declining investment value which in turn affects the performance of the target fund. This can be mitigated by diversifying the target fund's portfolios.

RISKS (CONTINUED)

Reclassification of Shariah status risk

This risk refers to the risk that the currently held Shariah-compliant securities by the target fund may be reclassified to be Shariah non-compliant in the periodic review of the equities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), the Shariah Adviser for the target fund or the Shariah boards of the relevant Islamic indices.

If this occurs, Affin Hwang will take the necessary steps to dispose of such equities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess capital gains derived from the disposal of the Shariah non-compliant equities. Affin Hwang will be required to dispose of these equities immediately if the prices are above the purchase price. Should the prices be below the purchase price, Affin Hwang may choose to hold on to these holdings until the prices meet the purchase price. Nevertheless, should Affin Hwang decide to dispose of these equities below the purchase price, the target fund will be faced with the risk of realising its losses, thus negatively impacting the NAV of the target fund.

Shariah-compliant warrants investment risk

The value of the Shariah-compliant warrants (“warrants”) will depend on the pricing of the underlying security whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. Affin Hwang may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
