## FUND MANAGER'S COMMENTS

- US equities posted a muted performance in October, with the S&P 500 index down 1.0%, as investors responded to a mix of economic data and corporate earnings. Heightened geopolitical tensions in the Middle East and uncertainty surrounding the upcoming U.S. presidential election also contributed to a cautious investment environment. September retail sales rose by 0.4%, surpassing expectations of 0.3% and underscoring resilience in consumer demand despite high-interest rates. Consumer sentiment improved, reaching a six-month peak as the University of Michigan's final October index rose to 70.5 from 70.1 in September, beating the preliminary 68.9 reading.
- The U.S. earnings season saw major banks report results above expectations, while in technology, ASML delivered strong results despite a dip in third-quarter orders due to delays from Intel and Samsung and a normalization in Chinese orders. Looking ahead, the U.S. presidential election on November 5 has become a focal point, with betting markets indicating increased odds of a Trump victory and potential Republican control of Congress. This scenario could pave the way for more reflationary policies and expanded fiscal spending.
- In Asia, the MSCI Asia ex-Japan index dropped 4.5%, reflecting slowing momentum in Chinese equities. The MSCI China index fell 5.9% amid investor dissatisfaction with Beijing's recent policy announcements, which lacked specificity. However, the Ministry of Finance reaffirmed its commitment to supporting growth and highlighted the central government's policy flexibility.
- Domestically, Malaysia's KLCI declined 2.9% following a largely neutral budget announcement. Markets welcomed the absence of capital gains or inheritance taxes, although a modest dividend tax introduced was unexpected but expected to have limited impact. The fiscal deficit is projected to narrow to 3.8% of GDP in 2025 from 4.3% in 2024, as federal revenue rises to RM340 billion from RM322 billion. Consumer stocks are anticipated to benefit from wage increases and larger cash handouts, while tax relief for first-time homebuyers provides a minor boost for the property market.

### STRATEGY:

- The funds return was 1.6% against the benchmark return of 1.5%. The attribution was coming from UW in both India and Taiwan which saw its broader market detracted, and selective stock pickings which has performed over the month.
- China + HK exposure saw some pullback after the sharp rally in late September / early October and market disappointment in the stimulus announcements. The manager thinks the Chinese government might announce further stimulus, given latest rounds of stimulus are not sufficient to prop up the economy.
- With Trump winning the US presidential election, the broader Chinese market might see some volatility in the short term, however the fund's direct holdings are relatively unaffected as they are domestic driven companies and minimal export revenue.
- Underweight in Taiwan has also with performance for the month as the broader technology sector has detracted, with exception of the mega caps name like TSMC after a strong earnings result.
- Technology sector in Malaysia was also impacted as market assessed the MYR strength impact on the exports.
- However, Hugel a South Korean company continued to do well over the month, as the US trade commission has ruled in favour of Hugel, allowing it to continue its business and the company reported better than expected earnings result.
- The Manager continue to underweight India due to its high valuation, both on the index on the single stock basis. Any disappointed in growth data may result in sharp correction in valuation.
- Fund Manager thesis on cyclical recovery in semiconductor demand remains intact as Ai chips related demand remain robust with ROI for AI Capex is still high.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
<b>Stock specific risk</b>	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
<b>Credit and default risk</b>	Credit risk relates to the creditworthiness of the issuers of the debentures or money market instruments (hereinafter referred to as "investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
<b>Interest rate risk</b>	This risk refers to the impact of interest rate changes on the valuation of debentures or money market instruments (hereinafter referred to as "investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the investment. The reverse may apply when interest rates fall.
<b>Warrants investment risk</b>	The value of the warrants will depend on the pricing of the underlying security, whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. We may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
<b>Country risk</b>	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

## RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

### Currency risk

As the investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

#### Currency risk at the target fund level

The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments (other than in MYR) may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.

### Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the policy owners' interest or diminish returns of the target fund.
